RE: Building Permit
3 Bedroom addition
To existing structure
14831 Cemetery Rd.
Cooksville, MD 21723

Dear Ms. Olorunfemi:

This office has received an inquiry into the procedures needed to receive approval for a three bedroom addition to the existing assisted living facility at the above address. Health Department records show that the existing septic system is sized for the original three bedroom house at this location. Additional notes in the property file indicate that the existing structure may have an additional bedroom, raising the number of bedrooms in the building to four. An addition of the proposed size to this structure would require percolation testing and soils evaluation for the purpose of establishing that the soils on the property are capable of supporting a structure of the proposed capacity. At the time of the percolation tests, an evaluation of the existing septic system on the property will be performed to see if upgrade of the current system will be allowable. If not, installation of a new system will be required.

In order to start the process of the evaluation, this office is requiring submittal of a percolation test application along with the associated five-hundred and six dollar fee. At the time of the application you must submit engineered plans appropriate for your proposal showing that all applicable setbacks can be met with the proposed area for percolation testing. Standard requirements for plans of this nature are enclosed. Also enclosed for your convenience are a percolation test application, and a list of engineers who regularly work in Howard County.

If you have any questions regarding this, I can be reached at (410) 313-1771.

Respectfully,

Gabriel A. Creighton, R.S.
