RE: PERCOLATION TEST RESULTS
A 58527
King's Grant, Lot 8
3212 Parliament Place

Dear Mr. and Mrs. Boyd:

Percolation testing conducted July 11, 1997 on the above referenced property indicated satisfactory soil conditions. Copies of the test results are enclosed.

This testing was requested during review of a building permit application for a proposed deck which would violate suitable setback standards by adjoining, if not encroaching into the existing sewage easement. The testing was conducted to establish suitable sewage easement area to replace that area lost by the encumbrance of the proposed deck and other causes, including grading.

Further review is contingent upon submission of a reasonably competent percolation certification plan showing the actual location and elevation of the excavated test hole and proposed sewage easement revision. The plat should also include the locations of the existing house, well, septic system and sewage easement on the property as well as the locations of any other relevant features such as streams or swales. A note must be included certifying that all existing wells and septic systems within 100 feet of property boundaries have been shown.

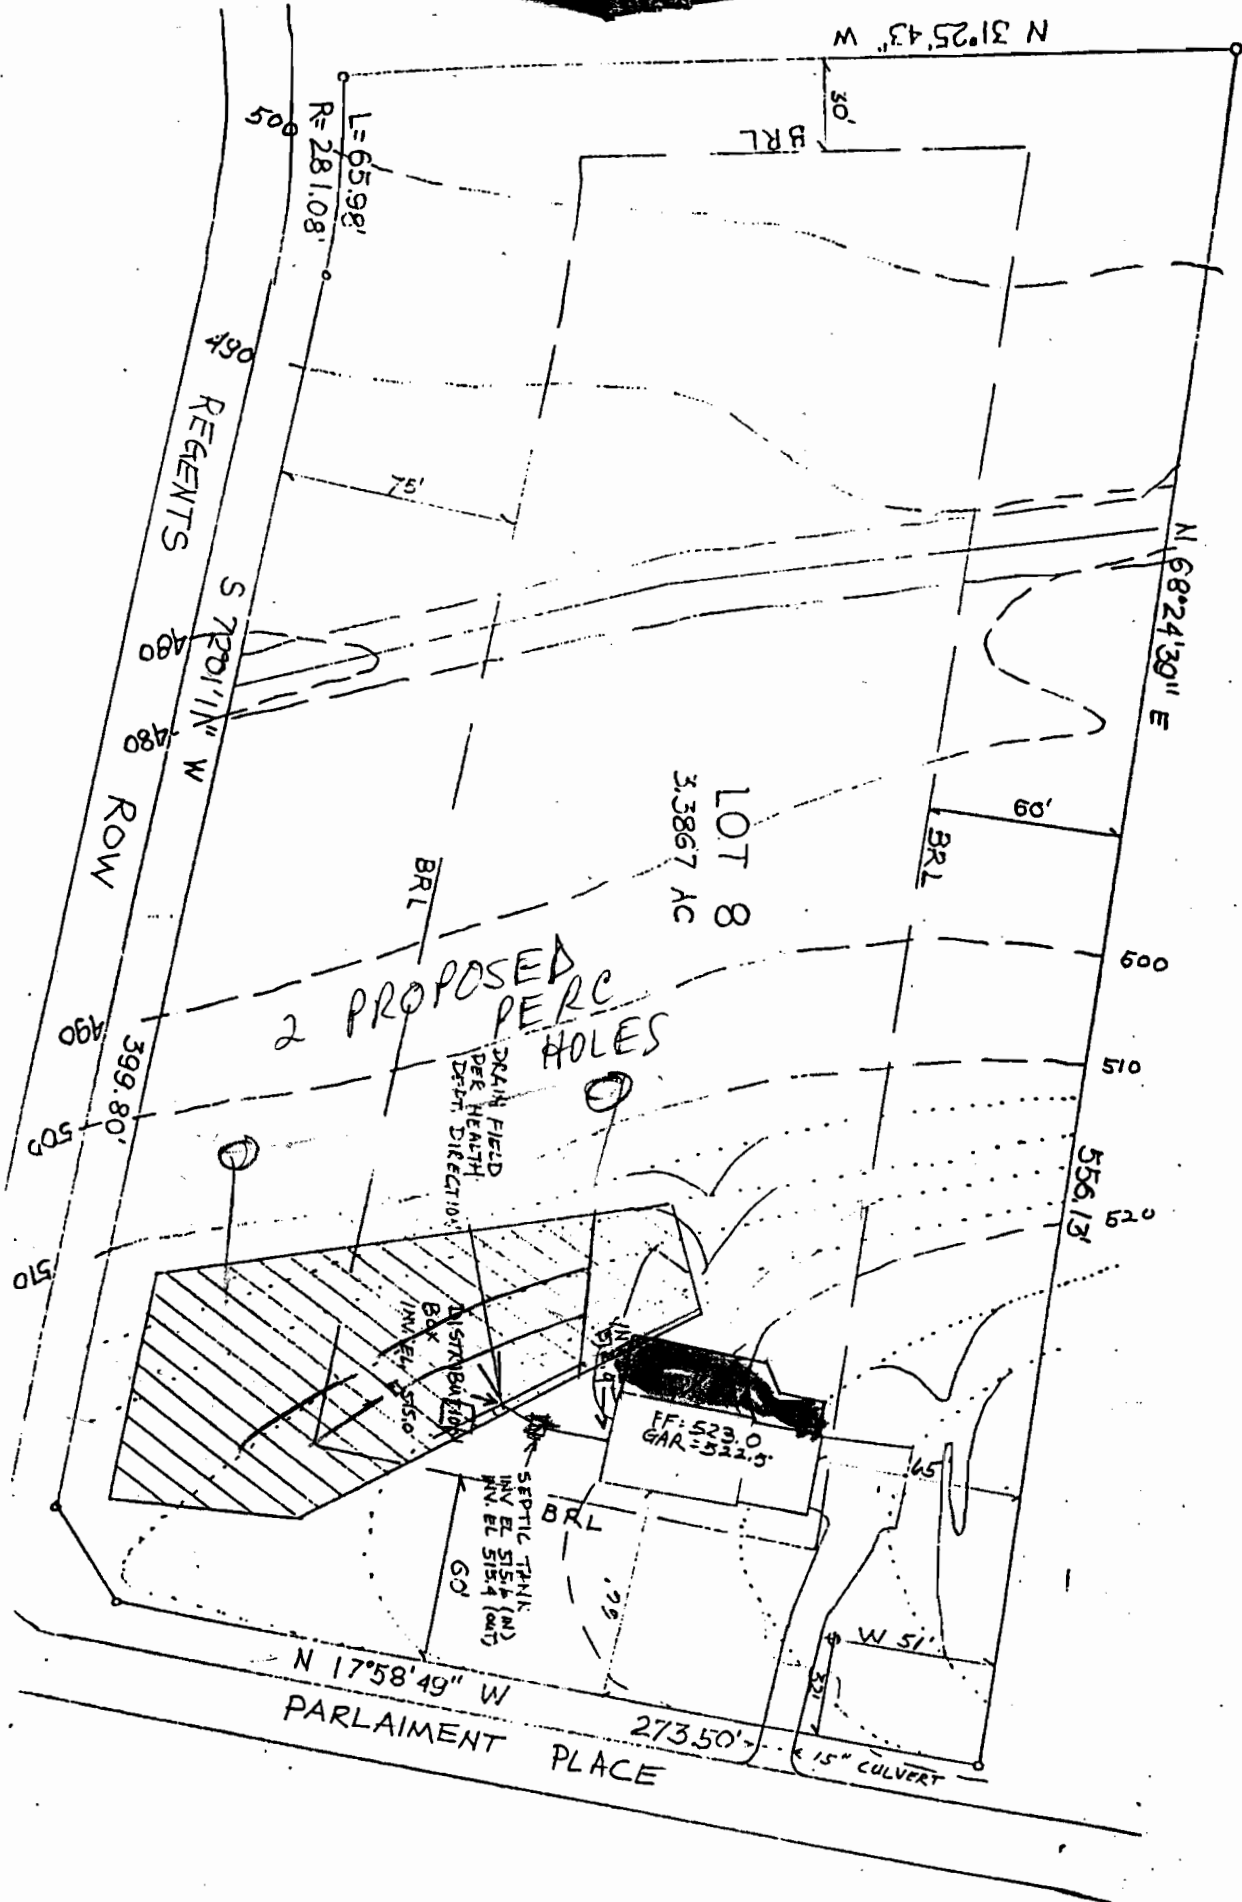

This should be submitted within 60 days to allow field verification if necessary. If you have any questions regarding this matter, please feel free to contact me at the above address or by calling (410) 313-2640.

Very truly yours,

Mark E. Rifkin, R.S.
