Hi Mr. Gregory:

Attached, please find a letter with comments pertaining to the review of building permit application # B17004401.

Should you have any questions, please don't hesitate to ask.

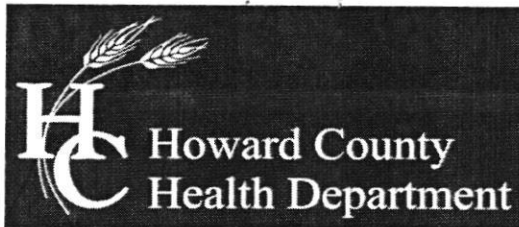

Respectfully,

Hank

RE: **B17004401**
14788 Carriage Mill Drive
Woodbine, MD 21797

Dear Mr. Gregory:

This letter is in response to building permit application **B17004401**. The application describes a 24' x 22' in law-suite addition. Upon review application and site plan, the submittal did not include a copy of the floor plans of the existing house. Floor plans of the existing house along with the proposed changes will determine if the onsite septic system is sized properly for the total number of bedrooms.

If the number of bedrooms exceeds the capacity of the existing septic system, the septic system will have to be upgraded prior to building permit approval. The first step in the process will involve perc testing in order to establish an area large enough to fit 3 systems (1 initial & 2 replacement systems) on percolation certification plan. Additionally, an Onsite Sewage Disposal System plan will also be required.

At this time, building permit approval has been placed on hold until existing floor plans, a percolation certification and OSDS plan, and any necessary septic system upgrades have been approved by the Health Department. Should you have any questions, please don't hesitate to ask.

Respectfully,

Hank Oswald, L.E.H.S
Bureau of Environmental Health
Well & Septic Program

Subject: 14788 Carriage Mill Drive - Septic Layout

Hello All,

Upon further consideration of the septic layout that was inspected on 5/21/2018 (11:00 am) the following statements apply:

The existing septic tank was measured in the field to be about 4.5' from grade. The elevation of the existing septic tank and the two proposed locations needs to be determined in the field. Any septic tank set deeper than 3' will require a traffic bearing tank (HOCO Code 3.810.D(14)). The potential depth of the existing tank may cause the requirement of a traffic bearing tank in either of the two proposed locations.

The uphill location is not suitable for tank maintenance repair and may not be approved.

Prior to the installation, the inlet depth of the existing sewer line, the inlet invert at the proposed tank locations, and the ground cover needs to be determined in the field with elevations relative to the house foundation. If the sewer line from the house needs to be reworked and re-elevated for this installation, a redline on a copy of the Percolation Certification will be required showing the new tank location, the elevations of the house foundation, septic tank invert inlet and outlet, and amount of cover.

Please contact the office with any questions.

Thank you for your diligence in protecting Public Health and The Ground Waters of The State of Maryland.

Happy to be of Service,

Joseph C. Cabahug - LEHS
