PRE-CONSTRUCTION: 4/22/19 OK to run 2 x 63' trenches on contour running above present (A) Pump/collapse one Drywell (B) 5/1/19 for slotted 2.5' drilled w/ rubble and needs to be replaced w/ new 1500g 2-comp tank next to the S.T. Full to trench should not be compressed (K)

INSTALLATION: 4/30/19-site inspection contractor onsite tank set working on connections, baffles in place, tank slotted, old tank still full of liquid (C) 5/1/19-site inspection contractor onsite, 1st trench started and ran into stone for drywell of rain garden, will not continue. 1st trench will be below this one and the 2nd trench below that, specs the same. Usable trench #1 being constructed, 3ft wide, 3ft inlet, 6ft. bottom, stone looks good, Dbox set but location will change because trench locations changed: ok to continue. (D) Septic line bored under driveway (E) 5/2/19-site inspection contractor onsite, 2nd trench completed, d box moved to allow for adjusted trench locations, 2 old dry wells were located and both were being pumped out and they will be crushed and filled in for abandonment. 2nd trench looks good, same specs but a little longer than the first trench.
