29 May 1995

Mr. Joe Rutter, Director
Department of Planning and Zoning
George Howard Building
3430 Court House Drive
Ellicott City, MD 21043-4392

Dear Mr. Rutter:

We feel the quality of our lives and the value of our property are diminished by the condition of 1246 Morgan Station Road, which is situated immediately to the south of our lot. We believe that many situations at that address are in violation of zoning laws, and, therefore, we seek your assistance.

Situations at that address that may involve zoning violations include:

1. A large recreational vehicle is occupied on the property and near our house. The RV was occupied almost continuously at the same site from April/ May to November of both 1993 and 1994. The only exceptions to the continuous summer occupancy are occasional day trips and one five-day absence. This year, the RV and its two residents arrived on 28 April, and they have remained continuously until the time of this writing. The RV is licensed in Maryland, with plate number 583633M. The RV is the residence of a retired couple named Shipley, who may be related to the apparent primary resident of 1246 Morgan Station Rd., Mr. Chris McDonald.

The RV usually has electrical connections and often has water connections to the residence at 1246 Morgan Station Rd.

Last year the RV discharged its septic tanks on the ground at the rear of 1246 Morgan Station Rd. We contacted the Department of Planning and Zoning through County Council Member Feaga's office in October 1994 about this health and zoning issue. According to a letter from Peter Beck of Council Member Feaga's office (dated 25 October 1994 with identification CF1630/PAB/gc/HEA-9 & PLN-19), and a memo from you to Council Member Feaga (dated 20 October 1994), Mr. McDonald was told that these properties were not zoned for RVs to be used as dwellings. In the memo from you to Council Member Feaga, you stated that your inspector was told by Mr. McDonald that his retired sister visits him several times a year. That is not the case; there is one continuous visit from spring until fall. We object to any occupancy of the RV next to our property, and even if it were not occupied, we feel it should be stored elsewhere.

We spoke to the Shipleys on the day when they arrived this year, and they said they feel that their place and mode of residence are none of our business and no business of the Department of Planning and Zoning.

2. Over the years the rear of the property has increasingly become a dumping ground for commercial and household trash. This trash includes: abandoned and rusting trucks, inoperable farm vehicles, pieces of vehicles, large metal frames, wire ropes, tires, and old furniture. There are also large stacks of rough-cut lumber and small heaps of trash wood from a previous McDonald family lumber mill venture (there are still "McDonald's Saw Mill" markings on some of the junk). It was initially assumed the mill product and equipment storage was a temporary situation, but the piles of lumber have now become overgrown by weeds, provide residence for a variety of rodents, and are bristling with poison ivy.

3. The physical condition of the property and dwelling include other possible zoning violations. First, last winter, Mr. McDonald had his front yard dug up to fix a problem with his septic field. Instead of reseeding the grass, the front yard was left uneven and bare. Second, there is a chimney added to the north side of the dwelling that was never completed. That chimney has been left with an inner layer of cinder blocks with metal tabs to support a brick veneer.

We would be happy to discuss this further and would welcome a visit at your convenience. We are quite serious about resolving these issues, and will certainly appreciate the assistance of the Department of Planning of Zoning in exercising our rights.

Sincerely,

COPY

MEMO TO: Joyce Boyd, M.D. Administrator
 Health Department

SUBJECT: Possible septic system failure

I have received a call from a constituent who indicated that they have detected the scent of raw sewerage coming from their neighbors property. Since the lots in this area are one acre, they expressed concern that the source of the odor is either their neighbor's septic system failing or raw sewerage from their neighbor's occupied mobile home being dumped illegally on the property. The street address with the possible failing system is 1246 Morgan Station Road.

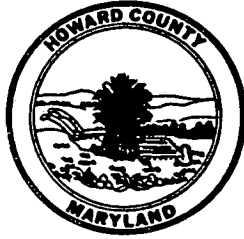

Please investigate to determine, if possible, the cause of the problem. Thank you for your assistance in this matter.

Charles C. Feaga
Council Member

CF1607/PAB/gc/HEA-9

HOWARD COUNTY HEALTH DEPARTMENT

Joyce M. Boyd, M.D., County Health Officer

October 21, 1994

TO: Charles C. Feaga, Council Member
County Council of Howard County

FROM: Frank Skinner, ^{fs,} Director
Bureau of Environmental Health

SUBJECT: Possible Septic System Failure

In response to your concern from a constituent regarding a sewage odor emanating from the property at 1246 Morgan Station Road, the following information is provided.

Mark Rifkin, an environmental sanitarian assigned to our Water and Sewerage Program visited the site on October 3, 1994. A septic system failure could not be verified, however, certain circumstances and information received by a temporary resident of the property, indicate that a failure is likely.

Enclosed is a copy of Mr. Rifkin's letter to the owner of the property that addresses our concerns regarding the status of the septic system. We are awaiting a response.

Should you wish to discuss this matter further, I can be reached at 313-2645.

October 19, 1994

Mr. R. Christopher McDonald
1246 Morgan Station Road
Woodbine, MD 21797

Dear Mr. McDonald,

On October 3, 1994, a sanitarian from this office inspected your property in response to a complaint about an overflowing septic system. While a septic system failure could not be visually verified on that occasion, Mark Rifkin spoke with your relatives who indicated they were staying on the property. They reported that the system had created backups in the basement, and that some drywell contents had been pumped into the adjacent farm field; and, in fact, a jet pump attached to a garden hose was observed on the right side of the house.

In addition, our property files indicate the system is 16 years old, which is the approximate life expectancy of a septic system. Because all evidence supports the conclusion that the system is, in fact, at capacity, it is suggested that appropriate measures be taken to repair the septic system. This includes a septic system repair permit (\$25 fee), and installation of a replacement drainfield.

Due to the fact that most of the front yard is already occupied by the existing system, septic system repair possibilities are extremely limited. These possibilities, for the most part, amount to one or two drywells adjacent to the existing drywell. Without relocating the plumbing to serve a new septic system in the rear of the property, there do not appear to be any other repair options.

Where public sewer is not an option, wastewater can only be discharged via a functional, approved septic system, or when necessary, by having the contents pumped by a licensed scavenger for disposal at a designated treatment facility. Any other methods would be in violation of Maryland state regulations.

If you would like to discuss these or any other repair options, it is suggested that you schedule a conference. If you would like to arrange this conference, or if you have any other questions, please call 313-2640.

Very Truly Yours,

Mark E. Rifkin
Sanitarian
